

Project 2 - Playwright UI Suite with Page Object Model (Notes)

Goal: Browser UI automation proof for SDET and AI Test roles.

Repo: playwright-pom-saucedemo

Target app: <https://www.saucedemo.com>

Stack: Python, Playwright, Pytest, pytest-playwright, pytest-html, GitHub Actions.

Page Object Model (POM):

Each page is a class. Selectors and actions live in pages/.

Tests describe user intent only, not raw CSS selectors.

Pages include BasePage, LoginPage, InventoryPage, CartPage, CheckoutPage.

Journeys covered:

Successful login lands on the Products page.

Add Sauce Labs Backpack to cart and verify cart contents.

Add two items and verify badge count.

Full checkout to the thank-you page message.

Checkout then logout back to the login form.

Negative login cases:

Wrong password shows credentials error.

locked_out_user shows locked-out error.

Missing username or password shows required-field errors.

Demo credentials for happy path: standard_user and secret_sauce.

Failure debugging:

pytest.ini keeps screenshot and Playwright trace only on failure.

Artifacts go under test-results. Open a trace with:

playwright show-trace path/to/trace.zip

CI runs headless Chromium on Ubuntu with playwright install chromium --with-deps.

Suite size: 9 automated UI tests. Milestones M1 through M6 complete.
